

**How do you create the
world's first affordable
automated slitter?**

You Innovate.

Introducing the Krasser Legionnaire. True automated slitting just became affordable.

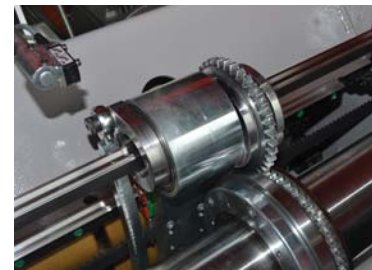

The game changing Legionnaire is the latest innovation from Krasser and MetalForming, Inc. The world's first affordable automated slitter features fully automated knife change-out. With touch controls, you can reposition five sets of slitting knives in under 30 seconds with a positioning accuracy of 1/32". And it is expandable up to eight knives.* It also automatically adjusts cut clearance—how far the knives "dive" into the material—to an accuracy of 1/100". The Legionnaire eliminates blade setting errors and the resulting

scrap, as well as poor gap setting that can cause early knife dulling. And it eliminates burrs caused by poor knife positioning and lack of cut clearance adjustment. In all, the Legionnaire is a surprisingly robust automated slitter for an amazingly low price.

Other Legionnaire features include:

- A 49.2" width capacity
- Slitting rate of 100 FPM
- 20 gauge slitting capacity with 5 knives
- 24 gauge slitting capacity with 8 knives

- Minimum strip width between knives of 2.25"
- Motor driven guillotine shear
- Automated 3 roll straightening available

Automatic knife positioner

With the straightening option, one top straightening roller pushes on two basic rollers. The top roller is motor driven by an AC motor and a frequency inverter. All unique

parameters are stored in a material database. Both bottom rollers are driven and synchronized to the main motor. Progressive diving in and lifting up mode provides best quality on sheets and includes more setting possibilities for different materials.

For all the details on the all new Krasser Legionnaire, contact MetalForming at 770.631.0002 or visit us online at metalforming-usa.com. The Krasser Legionnaire. Another game changing innovation from MetalForming.
